LABORATORY TEST REPORT

Regn Date : 05/03/2020 07:57
Name : MR. SUJEETH D
Regn No : 27205196
Ref By : SELF
Sample Type : Serum

Sample Collection : 05/03/2020 08:06
Print Date : 10/03/2020 16:23
Age / Sex : 32 Years / Male
Regn Centre : Nellore - 27
Ref no. :

Hepatitis B Surface Antigen (HBsAg)

<u>TEST NAME</u>	<u>RESULT</u>	<u>BIOLOGICAL REFERENCE INTERVAL</u>
HBsAg	: Non Reactive	NA

Comments:-

Interpretation

Nonreactive Specimen is negative for HBsAg or Hepatitis B Virus surface antigens have not yet reached detectable levels.

Reactive Specimen is positive for Hepatitis B surface Antigen .

- * This is a rapid test designed for qualitative determination of HBsAg in human serum.
- * This test is a screening assay; it should not be used as a sole criterion for confirmation of Hepatitis B infection.
- * Test results should be interpreted in conjunction with other HBV serologic markers like (eg, anti-HBs Ab, anti-HBc Total and anti-HBc IgM, HBeAg & Anti HBe Ab) and patient symptoms.
- * Individuals who have recently received Hepatitis B vaccination may have transient positive HBsAg test results because of the large dose of HBsAg used in the vaccine.
