Your Center

Comparison of kits used by participants

Other Information:-

1. Proficiency test items are plasma samples which are either HIV negative or HIV-1 positive. Plasma is separated from blood bags obtained from blood banks
2. The assigned values used for the HIV serology PT items are derived on the basis of test results of two ELISAs, two rapid and one Western Blot test.
3. All PT items have passed homogeneity and stability assessment.
4. Proficiency testing Scheme for HIV Serology is carried out twice a year.
5. Participants can appeal against the evaluation of their performance in the PT Scheme using the feedback form.
6. All information supplied by participant to the proficiency testing provider is treated as confidential. The identity of the individual participating laboratories are known only to the proficiency provider and NACO (for laboratories under NACO umbrella) if applicable.
7. The distribution of proficiency panel is subcontracted to courier agency
8. For any queries, participant can contact PT coordinator, ICMR-NARI.
